

## Access Assignment 4

Data Files Used: "YourLastName"University.accdb

This assignment is designed to explore Forms and Reports in Access.

1. Open your database "YourLastName"University. Create a Main/Subform using the Form Wizard using the Course and Classes tables. Use the supplied names for the Form and Subform. Find the classes with no faculty member assigned to them and assign yourself to those classes.
2. Create a Report based on the Course, Classes, and Faculty Tables. In the report list: Course, CourseSect, CourseTitle, Credits, and FacLName sorted by CourseTitle. Group the results by campus. On the report you should display the number of course sections offered for each campus and the total sections listed in the report. (Hint: Create a Query, "CourseReport" first and create the report from the Query). Name the report "CampusStats".
