

Under the “Cisco” folder on the main page, select “Cisco Configuration Professional”

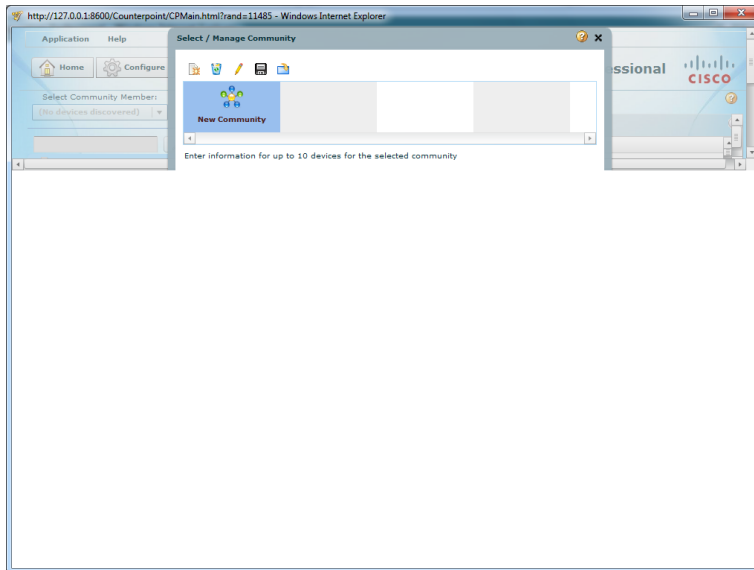

Right click the mouse and select “Run as Administrator”

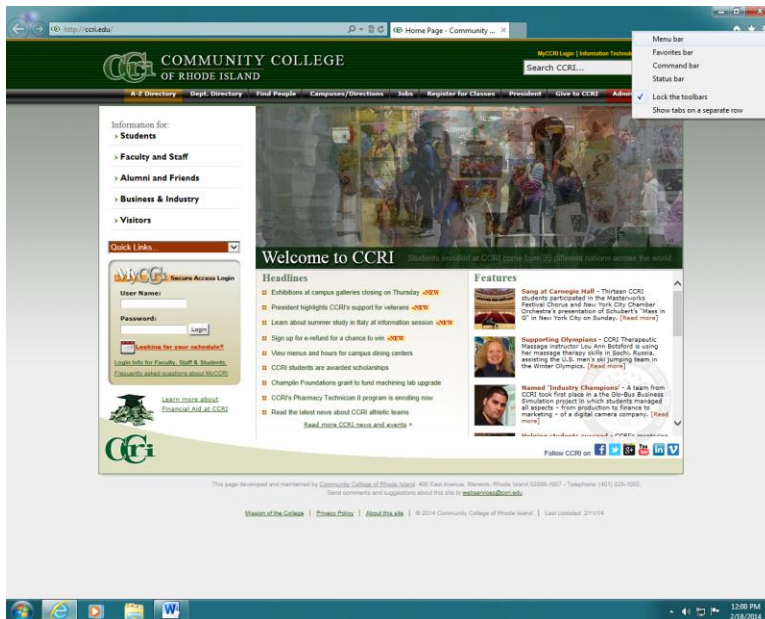

When “Cisco Configuration Professional” starts you may be prompted to accept the Java application, accept this application.

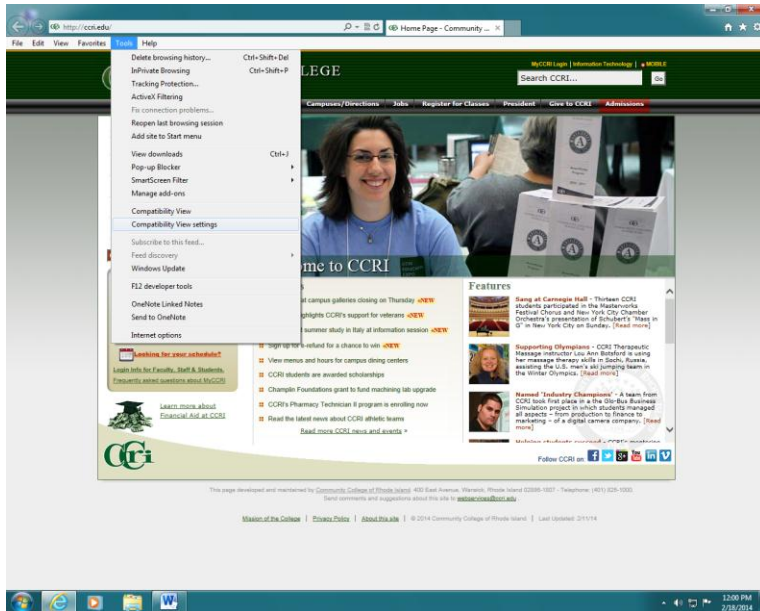

If Cisco Configuration Professional gives you only a small portion of the page, close the application.

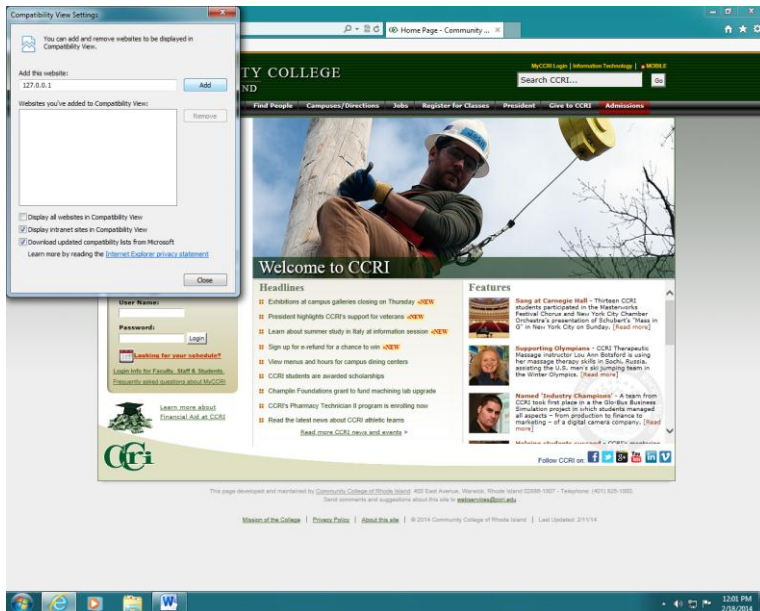

Open Internet Explorer and right click the tool wheel and add the “Menu bar” to Explorer.

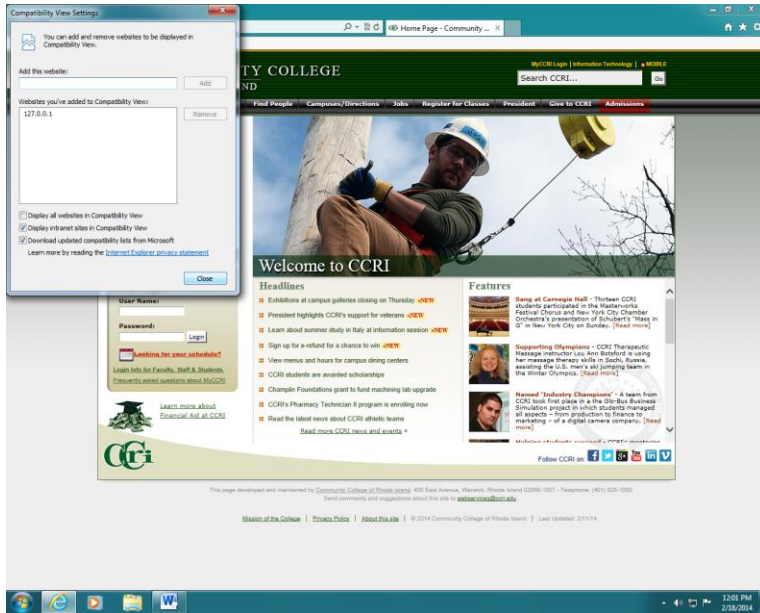

Under the “Tools” menu select “Compatibility View Settings”

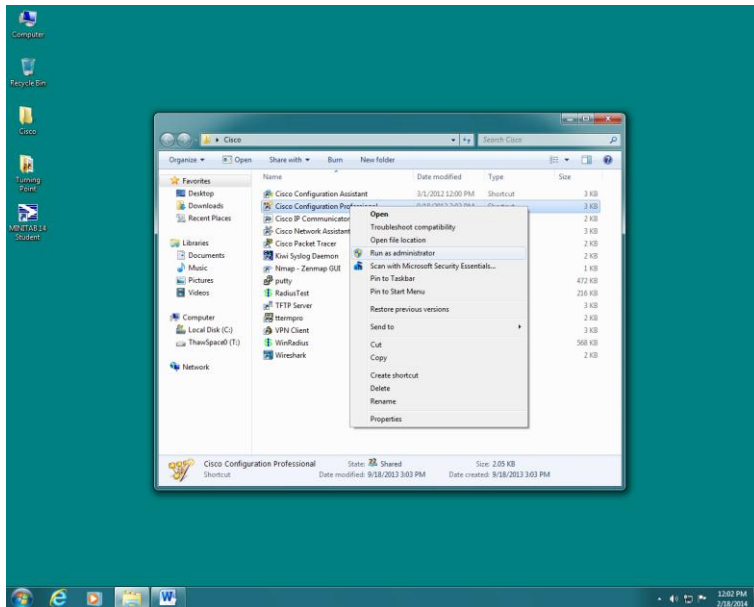

In Compatibility View Settings add the website 127.0.0.1 and select add.

Close Internet Explorer and start Cisco Configuration Professional again

Cisco Configuration Professional should now start successfully.
