Download the application form at
www.ccri.edu/cwce/career/massage.

The cost is \$595, plus a \$25 application fee

INFORMATION SESSIONS:

4 to 6 p.m. on May 26 and June 23
The sessions are open to any health care provider interested in learning more about working with individuals who have medical conditions.

This course is designed for all licensed massage therapists in New England.

Enhance your clinical skills by working with individuals in a hospital-based environment. You don't have to have the desire to work in a hospital to benefit from this training. You will gain a better understanding of the scope of the intrinsic factors involved with this population by working directly with patients receiving chemotherapy, radiation and hospital stay following treatment or surgery and other medical conditions. This knowledge can be transferred to your private practice. Interns are able to get firsthand experience as to what it's like for an individual to go through a variety of treatment options. Aspects of physiological changes during the massage treatment will be outlined in steps so therapists can work safely and skillfully with this population.

LEARNING OBJECTIVES:

- Identify the role of the massage therapist in a clinical setting.
- Demonstrate appropriate assessment skills when treating patients.
- Identify various cancer treatment methods.
- Demonstrate the skills for charting patient care notes.
- Demonstrate appropriate gentle massage techniques of the hands, feet, back, neck and shoulders.
- Utilize standardized scales when assessing stress and pain.
- Identify patients appropriate for massage treatment.
- Describe the importance of patient positioning and critical thinking as they relate to patient care.
- Describe lymphedema protocols identified by Tracy Walton and cancer treatments by Gayle MacDonald.
- Demonstrate skills to work collaboratively with hospital staff and peers.
- Identify research by reviewing the most recent literature.
